Usually, the button is located in the vicinity of the monitors power button. A menu of options should appear on the screen. If Auto Adjust isn't in the main menu, select the "Image Settings" submenu. Auto Adjust optimizes the display and corrects various brightness and contrast issues. You may not need to perform any further adjustments afterward. 3 Select the "Positioning" option if part of the screen is cut off. Some models offer 9300K and 6500K presets, which provide a more pronounced blue and red tint to the display respectively. 5 Choose "OSD Settings," or onscreen display settings, if you want to "stretch" the display either vertically or horizontally. If the image on your screen seems shrunken with a black boarder around it, this setting will enable you to fix that issue. Warnings You can make further display adjustments using the "Display" applet in Control Panel. Click Start, type "Display" in the Search box and select "Display" when it appears in the search results. From here, you can change the resolution, icon and font sizes and change the dots per inch DPI. Understand, however, that these are peruser settings and will only apply to the currently loggedon user. She earned a B.A.

The stand looks very similar to the original one, but it looks like Dell ditched the rounded design for a slightly different structure. The universal joint on the back actually pivots much easier than the one on our 2001FP, a plus for the 1905FP thus far. The monitor still features a quick release for a VESA wall mount. You can also see a button that activates the vertical height adjustment in the picture above. The 1905FP houses the AC to DC inverter inside the rear panel and hooks up using a standard threeprong 120V AC cable. For comparison, we included a snapshot of the Dell 2001FP input set below. This is several degrees cooler than some of the other monitors that we have in the lab, like the Dell 2001FP and NuTech L921G. While we did not detect any problems on our panel screen uniformity was perfect, we did notice that we could actually see the backlights from outside the monitor! We could not detect the light without looking carefully into the monitor. The obvious problem here is that the electrical components and backlights are exposed to the elements even if that might be an office environment. If dust settles on the backlights, we could have a big problem with screen uniformity and brightness. Remember the Samsung 193P that uses the same panel. When we tested that LCD, we thought it was innovative that the monitor completely enclosed the LCD panel without any openings. In retrospect, Samsungs decision to do that might have been more function than form. Doing this will certainly void your warranty. When we have external inverters leading to the monitor, the DC must be modulated and inverted back to AC for the florescent backlights. Several vertical bands, each of which blurred an entire column of the display.

Okay, it couldve been the video card, but it looked fine on a CRT monitor. Youve been warned !And love it. Buy one now. But dont pay much more than this. The video kept switching on and off. Im assuming this is because Dell uses an 18pin DVI cable, whereas the DVD player requires a 24pin cable. When the video was visible, picture quality was excellent the same as playing a PC DVD player like WinDVD, although my Denon has better deinterlacing. Unfortunately, the red drift artifacts were still visible. I think its time to call Dell again, return both these units, and pick up a 2001FP before they disappear. I took the link to the gm5321 document, and it says. Does it mean the

gm5321 doesnt do HDCP at all. Or just that gm5221s other than the h dont Or.. Im not sure how to interpret it.Its hard not to miss. Notice how theres a very strong hue of red on those parts. Thats an example of what I see, but mine is more exaggerated when people and objects are moving.I have Dell sending me another 1905FP as an exchange so Ill verify if the entire line has this problem. If so, I think I might pick up a 2001FP while theyre still available and see how an IPS panel performs compared to this VA panel.It was as if the red colour was lagging behind everything else. It was easiest to see under their noses, like they were all getting nosebleeds. Ill keep watching and let everyone know.Video and gaming not a priority for me. It was 20% off so it was a fantastic price when you compare it to the Samsung. Movies arent great on it but Im quite happy with the quality in games. Ive come from a CRT and this is my first LCD. When I first played HL2 on it I wasnt overly pleased but after adjusting the brightness etc.There is very little ghosting, and the contrast is very good. But I think this because of the lack of blooming in LCD screens, artifacts of movies are more visible. Cant see any other way a monitor can affect video playback.But while being as good as the Samsung 139P, it costs less.
