Here is a link DeWalt D28402 Instruction Manual Page 10 Or you can read some special articles about angle grinders like here I read it too and found many useful information for myself. It should look just like the picture, the nut side of the disc threads on first. Depending on what disc you want to put on you may need a spacer that goes on first and then a threaded washer on the outside. www.ereplacementparts.com. Could someone help please Press it down and turn the blade by hand until it locks in place. Then you need either a spanner wrench or nut wrench depending on which arbor nut you have. Grinders usually come with whichever wrench they need. Most grinders have an arbor nut with two or four holes and require a spanner wrench with two studs that fit into two of the holes to remove the arbor nut. If you don't have the proper wrench sometimes you can get the arbor nut off with a pair of vice grips or pliers. You will want to turn the nut in the same direction as the blade spins when the grinder is on to remove it. When you put the new blade on, get the arbor nut hand tight, it is self tightening and will get tighter as you use the grinder. What do I have to do to install them on the grinder.

You may need a centre adaptor as some flap discs are larger in the centre hole. It should look just like the picture, the nut side of the disc threads on first. Depending on what disc you want to put on you may need a spacer that goes on first and then a threaded washer on the outside. When I went to tip the blade two small balls fell out. What do they do and how do I put them back. The balls on the Dewalt 318 jigsaw are parts 68. Answer questions, earn points and help others. Tighten as you would the grinding wheel securing nut. The grinder supports not only grinding wheels but also brushes and sanding discs. The grinding wheel, sometimes known as the blade, wears down as you grind steel. Changing a Dewalt grinder wheel is a matter of locking the spindle so the wheel does not rotate during removal. Replacement wheels are available at home improvement centers and Dewalt authorized dealers. Press and hold the spindle lock on the stem of the grinder between the wheel guard and the body. Rotate the wheel with your other hand until it locks into position. If you cannot locate the original wrench, use a regular wrench to remove the nut. Place the backing plate back over the stem with the concave of the plate pointing away from the grinder. Thread the securing nut onto the stem until the stem begins to turn. Show Comments.
