CamerasPDF Sobre nosotros Privacy Policy DMCA Contactos Scholarship Upload Manual. Like its predecessor, the Xt boasts a 3megapixel CCD, a 3X zoom lens, and unique styling. Improvements include a marginally smaller size, a spot meter, and a redesigned control layout. Though these changes arent dramatic, the Dimage Xt, like its forerunners, is a top choice for a chic, ultraportable snapshot camera. About 5 percent smaller than the Dimage Xi, the Xt weighs only 5 ounces with the battery and the media installed, and its 0.8inch depth makes it the worlds thinnest digital camera with a zoom lens. The lens zooms internally, so it never protrudes from the device. Thats generally a plus, but it makes it easy to slide an errant finger over the lens when youre shooting. We find it less appealing than the original twotone finish, but thats a matter of taste. For the Xt, Minolta changed the mode selector from a sliding switch to a rotating dial, and the power and shutterrelease buttons on top of the unit are farther apart. Youll also find a new quickreview button for instantly accessing the playback modea nice addition. As with the earlier Dimage X cameras, the placement of a control on each side of the zoom toggle sometimes caused us to inadvertently change a setting when we wanted to zoom. When you activate the LCD menu, the three controls together serve as a fourway navigation pad. These include the new spot meter, exposure compensation to plus or minus 2EV, and a range of lightsensitivity settings from ISO 50 to 400. Whitebalance selections include auto and four presets, but unfortunately, theres no manual option. Three JPEG compression levels are available. The camera can also make VGA or QVGA copies of your pictures for easy transmission by email.

In movie mode, the Dimage Xt will capture 320x240pixel MPEG video with sound as long as your storage medias capacity allows. You can also record 15second audio photo captions and 180minute separate voice memos. The Xts design makes this model especially well suited to doubling as a voice recorder, which might appeal to business users and students, but its microphone isnt powerful enough to clearly capture speech from someone more than a few yards away. Finally, you can hook up the Dimage Xt to a Windows PC but not a Mac via a USB cable and use it for live videoconferencing. The camera can stand upright in the included batterycharging dock, so its a handy videoconferencing stand, too. The dock will also charge a battery alone. This reviewer will march naked down Broadway in the middle of February if anyone can show us a recognizable photograph taken with the Dimage Xt 100 feet underwater. Many snapshotoriented cameras operate sluggishly, but to Minoltas credit, the Dimage Xt delivers quick performance. Startup time is very fast at about 1 second, and shottoshot time runs a reasonable 2 seconds or so if youre shooting JPEG files. Its a lesspleasing 15 seconds with TIFF files, but thats no worse than what the competition has to offer. In continuousshooting mode, the Xt can snap eight highestquality JPEG images at nearly 1 frame per second before pausing to clear the buffer. Even with the flash firing, the continuousshooting rate is about 0.6fps, which is quite good for a camera in this class. Consequently, shutter delay is fairly short outdoorsabout 1 secondbut a little longer than average indoors. As with all AF cameras, you can greatly decrease shutter delay by prefocusing. We were also pleased with the 1.5inch LCD, which is reasonably sharp, works adequately in both daylight and low light, and shows 100 percent of the actual image. The builtin flashes range extends to nearly 9 feet at ISO 100, which isnt bad for such a small camera.

The Dimage Xts pictures, though not the greatest in the 3megapixel class, are generally good and rank among the best weve seen from extremely compact sub6ounce cameras. Theyre adequately sharp overall, although the Xt appears to be applying moderate noise reduction. The result is a smooth, lownoise image that looks realistic but suffers from some loss of fine, lowcontrast details. We were less impressed with ISO 400 shots, which showed more noise than average. Minolta wisely calibrated the automatic ISO setting to use light sensitivities between ISO 50 and 160. You can manually select ISO 200, which produces somewhat noisy pictures, or risk ISO 400. Text you capture with the camera is crisp and readable, but as with other consumer digital cameras, the Xt Bizs resolution is not high enough for accurate OCR processing. Learn More When the first of the line, the 1.9 megapixel Dimage X, was launched in early 2002, it was by far the smallest and lightest digital camera on the market, and also had one of the fastest startup times. It achieved both of these feats thanks to an innovative lens design.

There have been eight further models in the series, all sharing the same basic core technology. After the competent but rather pedestrian X50 and X60 models, the X1 also represents a return to the spirit of innovation and style that made the series successful in the first place. Measuring 95 x 68 x 19.5mm, the X1 is shorter and thinner than the original Dimage X. Everyone who has seen this camera while I have been testing it has commented on how good it looks. The X1 is available in three coloured finishes; an attractive wine red, a stunning gunmetal black and the satinfinish silver version pictured here. The allmetal case is has a futuristic rounded capsulelike design that slips easily into a shirt pocket, with a metal cover over the lens and a flat onepiece rear panel covering the big 2.5in, 118,000pixel LCD monitor. There are indicator lights concealed behind the mirror finish of the rear panel, and the minimalist control layout is both attractive an easy to use. It's an extremely pretty camera, although the glossy finish does show up fingerprints, so you'll be polishing it a lot. Although there are several 8 megapixel compacts on the market the X1 is by far the smallest. It is also the smallest camera to be equipped with antishake technology, which is more usually found on cameras with longer lenses. The camera has two main shooting modes, controlled by a slider switch on the top plate. Normal mode is full auto, with exposure compensation adjusted by the up and down directions on the Dpad and white balance, ISO sensitivity, metering options and drive mode altered via the menu. Once the camera is set up the way you like it you can forget the menu and just use the scene modes. The camera starts up extremely quickly in under a second, and the monitor screen is large, bright and easy to see in most lighting conditions, although the highly polished surface of the rear panel does lead to annoying reflections making the screen difficult to see in bright sunlight.
