Dogtra 2300 NCP AdvanceDownload Owners Manual .pdf Click here to purchase a Euro charger for this unit. Features Shipping outside of the Continental US will be extra. My problems could have been solved months earlier. Her behavior completely changed even during the first few minutes of wearing the collar. It took me around 3 days to finally get the results I wanted. I couldn't believe how quickly she was able to understand how the collar works. I've only been using the pager mode on her. What I like most about it is that it works perfectly on her and there's no shock involved. I highly recommend this product. It works great in the field and in the water. What more can I say, this product is perfect. It worked without a hitch from day 1 of training until we completed the training of my dog.

It was my first time to use a collar but I had no problems with using it. The instructions were very clear and the buttons were strategically placed. It holds charge like forever. I think there was a time that I only charged it once in a span of two weeks. It's really great. We're planning to get another dog and I'm so excited to use the collar on him too. Great product! Highly recommended. I have used a few others, and this collar is leaps and bounds above all else. I am astonished by the range, and currently having a very sensitive dog, the ability for very low level stimulation. I am impressed. You will be impressed. Also, allk9.com is a great website. Keep up the good work. The 2300NCP e-collar comes with a durable receiver that outputs LowHigh stimulation from 1127 levels for precise and gradual control, using a patented Rheostat Intensity Dial with LCD display on the handheld transmitter. The 2Dog Expandability and intuitively placed buttons for Nick and Constant stimulation and Pager Vibration lets you simultaneously control up to 2 dogs in training, making the 2300NCP Expandable the perfect training gear for mild or stubborn dogs. To expand your Dogtra 2300NCP to a 2 dog system add an extra collar. When properly fitted, you should be able to fit a finger or two snugly in between the contact points and your dog's skin. When this happens, the contact points may rub the skin and cause irritation. How to Find the Right Stimulation The Dogtra 2300NCP System comes with the rheostat dial on the transmitter. The rheostat intensity dial controls the stimulation level, with level 0 being the lowest level and level 127 being the highest. The level of stimulation best suited for your dog depends on your dog's temperament and threshold for stimulation. Always start at the lowest level and work your way up. The appropriate level can be found when the dog responds to the stimulation with a mild reaction, such as a tensing of the neck muscles.

<http://schlammatlas.de/en/node/23532>

The stimulation level may vary depending on the training situation. When highly distracted, dogs will

require a higher level of stimulation. To learn more about the Dogtra 2300NCP System read the Owner's Manual. All rights reserved. Upgrade to a different browser or install Google Chrome Frame to experience this site. You must have JavaScript enabled in your browser to utilize the functionality of this website. No matter what type of training needs you and your dog have, we've got an industry leading remote dog training collar to help you achieve your goals. It has a mile range, rechargeable batteries, and fully waterproof receiver and transmitter.. It is equipped with Lithium Polymer batteries that are fully charged in 2 hours. The transmitter on the 2300NCP is equipped with stimulation modes in Nick and Continuous, a nonstimulating Pager vibration mode, and an LCD screen on the transmitter to display the exact level of stimulation and the battery life, even in dark or low light conditions. It uses low to high power with a rheostat dial that allows for gradual increases in stimulation intensity with no jumps between levels 0127. It has a blue LCD screen that displays the exact level of stimulation and can be seen in the dark or low light conditions with a three bar battery life indicator and LED colored indicator to show remaining battery life. Both collar and transmitter are fully waterproof and uses a new Lithium Polymer battery that provides a 2hour rapid charge. Use single quotes for phrases. The 2300NCP Advance is an excellent multipurpose electronic collar for mild mannered or stubborn dogs. This collar is also available in a two dog system Dogtra 2302NCP Advance. The rheostat intensity dial is located on top of the transmitter with 0 being the lowest setting and 127 being the highest setting. The Dogtra 2300 NCP has an LCD screen that displays the stimulation level you are using 0127 on the screen.

The LCD Battery life indicator shows 3 bars at full charge, 2 bars at medium charge and 1 bar when the transmitter needs to be charged. It will flash every four seconds when the transmitter has been turned on. The Dogtra 2300NCP Advance is a true multipurpose e-collar for mild mannered or stubborn dogs. The Dogtra 2300NCP Advance single dog unit has four different buttons on the transmitter, one on the face of the transmitter, two on the left side and one on the right side. The "Nick" button is the top button on the left side and is imprinted with the letter "N". When the "Nick" button is selected the receiver sends a single, rapid pulse of electrical stimulation to your dog. The "Constant" button is the bottom button on the left side. By pressing the "Constant" button your dog will receive continuous stimulation as long as the button is pushed, for up to 12 seconds. The "Pager" button is located on the face of the transmitter. By selecting the "Pager" button your dog will receive a nonstimulating vibration as long as the button is pushed, for up to 12 seconds. The power button is located on the right side of the transmitter. It has five different buttons and a toggle switch on the transmitter. There are two buttons on the face of the transmitter, two on the left side, and one on the right side. The toggle switch is located on the face of the transmitter. The toggle switch has a setting for "Nick" and another for "Constant". The two buttons on the left side of the transmitter are color coded brown for the black collar and orange for the orange collar. These buttons emit either "Nick" stimulation or "Constant" stimulation which ever is selected by the toggle switch. The pager buttons are located on the face of the transmitter and are also color coded corresponding to the color of the collar. The transmitter power button is located on the right side of the transmitter and is used to turn the unit off.

Accessories such as, chargers, splitter cables, antennas, straps and batteries have a one year warranty from the date of purchase. Once the first and second year warranty coverage expires, the Limited Lifetime Warranty will cover for all parts except accessories and labor fees. Labor fees and shipping fees incurred are the customer's responsibility. Labor fees will be variable depending on the extent of work required. The Limited Lifetime Warranty will expire 5 years from the date of purchase. Customer Ratings Snapshot 5 Stars 7 4 Stars 1 3 Stars 1 2 Stars 0 1 Star 3 Total Reviews 12 I can easily let him run around without worrying about him not coming back. With just a small nick from the collar, he quickly runs back to me. Before this collar, he would be running around for hours and would only come back on his own terms. This collar is not just an effective training tool, it is also tough. It is

100% waterproof and has a nice LCD display which allows you to quickly see the current settings of your collar. Depending on your dog's behavior, you can choose to use the nick, continuous and pager vibration modes. Another great thing about this product is that it operates on rechargeable batteries. So far, the batteries are working excellently. Charging is very quick and they last long enough which is great especially during field activities. Pros Range, Waterproof, Momentary, Continuous, and Pager, Excellent Batteries I would recommend this product to a friend. Was this review helpful to you. ByLara Impressive 5 out of 5 Summary This is a great product. I'm particularly impressed by its excellent battery life. It is easy to recharge and lasts long when in use. I was very critical about the battery life because we usually go out for the whole day for field work. So I read up on other dog collars and read reviews about them. I steered clear from those with a lot of battery issues and ended up buying the Dogtra 2300NCP. Good thing I did coz it's working pretty well.

On its performance, I have no complaints as well. Even at long distances, my dog easily responds to it. That says a lot about its operating range. It has 127 settings but I only use the lower settings so I really have no use for the other levels. But it's still great to have the flexibility just in case I might need it in the future. I sometimes use the vibration mode if we are just playing around and he's not that hyperactive. It's a great feature too. I would high recommend this product. It works! Pros Excellent Battery, Range, Flexible, No complaints I would recommend this product to a friend. ByTiony1986 Worth it 5 out of 5 Summary I had problems with my dog's behavior. I couldn't control him even how loud I shout the commands at him. It was really getting more exasperating each day. To be honest, I almost gave up. Good thing somebody recommended this collar to me. I was really desperate so I immediately bought one although I had no clue how to use a dog collar. I read about it a little while waiting for the package to arrive and read the instructions when it finally arrived. It was surprisingly easy to set up and use. The first time we used it, I was surprised to see that my dog was able to respond to it right away. Pros Waterproof, Great Product I would recommend this product to a friend. ByNosem1990 I should have bought this sooner 5 out of 5 Summary The only regret I have is not buying this product earlier. My problems could have been solved months earlier. I've had my dog for 2 years now and it was only after year one that I finally decided to use this product to teach her how to behave properly. I was really convinced that she had a mind of her own. No matter how I teach her commands, she never listened. I tried giving her treats but they didn't work on her. She just took them but still didn't follow the commands I teach her. It was really frustrating. When I finally bought this collar, it was like I have a different dog.

I couldn't believe how quickly she was able to understand how the collar works. I've only been using the pager mode on her. What I like most about it is that it works perfectly on her and there's no shock involved. I highly recommend this product. Pros Pager mode, No shock, Works Perfectly I would recommend this product to a friend. ByMeredith Great performance 5 out of 5 Summary This collar is effective, very userfriendly, gentle on the dog with the several levels of correction to choose from, you can pick the least level that your dog can detect and very durable. What more can I say, this product is perfect. It's really great. We're planning to get another dog and I'm so excited to use the collar on him too. Great product! Highly recommended. Pros Effective, Great Product I would recommend this product to a friend. Was this review helpful to you Not only did my order come several days earlier than I expected but the. Steve The service was very nice. Exactly what I ordered came exactly when you said it would. I was able to track the packages status on UPSs web site from the tracking number I received from your shipment. Tony S. Monona, WI View More. LCD screen displays exact level of stimulation even in dark or low light conditions. Three bar battery life indicator. Low to high power. Package contents Transmitter Receiver Battery charger and splitter cable. Test light Owners manual Carrying case. Failure to follow these safety instructions could result in injury to you, your dog and others, or it could result in damage to your Dogtra product or other property. Each dog may have a different tolerance for and reaction to Dogtra products. Closely

observe your dog when determining the right level of stimulation, collar fit, and other settings of your Dogtra product. Dogtra collars should fit comfortably and not too tightly, so that the collar stays in place and does not move around your dog's neck. Do not leave a collar on your dog for an extended time.

Although each dog is different, Dogtra recommends that its collars be used a maximum of 4 to 6 hours at any one time on your dog. A collar that is used for overly long periods or that fits improperly may cause skin irritation. Regularly check the collar's contact area on your dog's skin. If your dog exhibits skin irritation or sores, stop using the Dogtra product and consult with a veterinarian. Dogtra products are not intended for use in any other manner; they are not intended for use with other animals or with humans; and they are not intended for use in unsafe situations or environments that could lead to death, injury, loss or damage. Do not attempt to replace the battery yourself. Contact Dogtra or your Dogtra retailer to replace your battery. Dispose of batteries as provided by your local regulations. Do not use a damaged or malfunctioning product as it may cause injury or property damage. If your product is damaged or malfunctions, contact Dogtra to obtain service before using the product. Do not use or keep your product near heat or flammable sources. If you notice damage to your product, its charger, or battery, obtain service from Dogtra before charging the product. Do not use more than one splitter cable with a single battery charger. These electromagnetic waves or radio frequencies may interfere with pacemakers, defibrillators, or other medical devices. Consult your physician or medical device maker before using your medical device with a Dogtra product. If you think that your Dogtra product is interfering with your pacemaker, defibrillator, or other medical device, stop using the Dogtra product. Seek the assistance of a dogtraining specialist or veterinarian when dealing with aggressive dogs. Adult supervision and close attention are necessary when Dogtra products are used by or near children. Pairing Use the Select button to set the GPS Connector to Collar to pair the Connector with the Collar.

Set the GPS Connector to Phone to pair the Connector to a smartphone. Press and hold down the Connect button until the LED blinks rapidly. The GPS Connector will now be ready for pairing. Power Off To turn the GPS Collar off, press the Power button until the LED turns off. Pairing To place the GPS Collar into pairing mode, begin with the device turned off and hold down the Power button until the LED blinks rapidly. The PATHFINDER set comes with both parts paired to each other. How to Charge 1. Connect the charger to the GPS Connector and GPS Collar using the splitter cable. 2. Plug the charger into a 120volt outlet. 3. When fully charged, detach the cables and plug the rubber caps over the charging ports on the GPS Connector and GPS Collar. 4. The GPS Collar turns off and cannot be used while charging. The GPS Connector functions while being charged. The LED will display red while charging and green when the unit is fully charged. The GPS Connector LED will be green when turned on while charging. A depleted battery requires 3.5 hours to fully charge. The LED colors represents the battery life Green when 50100% battery, Orange when 1050% battery, Red when 010% battery. Phone When turned on, press the Select button to set the GPS Connector to Phone. When set to Phone, a green LED will stay on. Hold down the Connect button until the LED blinks rapidly to place the GPS Connector into pairing mode. Collar When turned on, press the Select button the set the GPS Connector to Collar. When set to Collar, a green LED will stay on. GPS Collar The LED on the GPS Collar blinks while turned on, and the LED colors represents the battery life Green when 50100% battery, Orange when 1050% battery, Red when 010% battery. These devices need to be paired for the PATHFINDER system to work properly. Pairing Additional GPS Collars Pair the GPS Connector and GPS Collar in close proximity to each other. You can use the PATHFINDER app to check if the GPS Collar is properly paired.

1 Turn the GPS Connector on. 2 Check that the GPS Collar is turned off. 3 Use the Select button on the GPS Connector to set the LED to Collar. 4 Hold down the Connect button for 5 seconds until the LED blinks rapidly. Release the button. 5 Hold down the Power button on the GPS Collar until the

LED blinks rapidly and emits three beeps to show it has coded. 6 The GPS Connector and Collar will return to blinking in normal intervals when pairing is complete. After pairing, take the GPS Collar outdoors to acquire a GPS signal. Once the signal is acquired, the GPS Collar icon will appear on the Map tab of the PATHFINDER app. Operating the PATHFINDER near tall buildings and other steel structures will reduce the range of the GPS signal. Not acquiring a GPS signal for prolonged periods of time while outside may indicate issues with the unit. You should be able to fit a finger in between the contact point and your dog's skin. The best location is on either side of the dog's windpipe. Improper Fit A loose fit can allow the collar to move around on the dog's neck. When this happens, the contact points may rub against the skin and cause irritation. If the collar is too loose, the contact will not be consistent and cause the corrections to be inconsistent. Dogtra uses surgical stainless steel contact points and antimicrobial plastic to protect the dog's skin. If the dog is to wear the e-collar for long periods, occasionally reposition the collar so that the contact points are moved to a different location on the dog's neck. Make sure you check for skin irritation each time you use the unit. Please look at your dog's reaction to find the right level of stimulation. The stimulation level may vary depending on the situation and distractions. A distracted dog will require a higher level of stimulation compared to when there is no distraction. Caution! Tighten until firmly in place. Be careful not to over tighten.

Note The test light may not be visible if the intensity level is set below level ten. The TRX Collar does not come with stimulation or tone. The dog icon displays your dog's current action status. My Position When the GPS Connector is paired with your phone, your current position and tracks will be displayed. The dog display icon will change to an icon that represents these issues, such as poor connection, GPS signal loss, or low battery. Devices shared will display the shared symbol on the device icon. The TRX Collar is displayed as a square icon in the Map and Compass tab, Device List, and Dog Status page. TRX Collars will not be displayed in the ECollar tab. All other functions are available for the TRX Collar, since both the PATHFINDER and PATHFINDER TRX can be used together in a multidog set up. In the Alarm Settings for Dog Alerts, you can receive notifications for the Selected Collar and All Collars. The current selected dog is displayed with an outline around their icon. The markers can be used to mark important locations. The marker will be stored in the history file. When starting a new Tracking History, the previous marker will still be on the map. If you tap on the marker, you will see the marker delete button and a line from the current location to the marker. Text can be saved along with the markers. You can create 20 markers of each type except Ruler and Direction. Ruler The distance ruler can measure the distance between multiple points. When finished, click " x " to exit out of the distance ruler. Directions The Directions function is used to find your way back to your desired destination, which can only be marked with one marker. You must have the Google Maps application installed in order to see the directions to your destination. You will also need to use either cellular data or WiFi to use this function. You can see the direction and distance between these two markers on the Compass tab.

The markers cannot be deleted while the recording is in session. You must stop and save the session in order to delete the Start Marker and End Marker. Select dogs and hunters from the list to display them on the compass. You may also tap on a marker on the map to show the information on the Compass tab. The tone sound level cannot be adjusted and the tone will ring each time the button is pressed. The Nick and Constant stimulation modes have stimulation levels from 1 to 100. The stimulation level can be set for individual dogs. The List view is recommended when training multiple dogs. Map view displays selectable dog icons on a mini map. Mode Button Use the Mode button to switch between Nick and Constant stimulation modes. Lock Button The Lock button disables training functions until unlocked. Use the lock feature so dogs are not accidentally stimulated. Use the more options button in the Device List to unhide a device. Reorder Reorder how the devices show in the app. Press reorder to place the device in sorting mode. Hold down the sort button and place the device in the desired position. The new order will be used in the Map,

Compass, and ECollar tabs. A pop up will appear when a device has been successfully received. The device details displays the total distance traveled, current speed, ID, GPS strength, radio frequency strength, battery level, and shared and hidden statuses. Slide the device details page to view other devices. Name Press Name to edit the device name. ID The GPS Collar ID can be changed. Change the ID when the signal conflicts with another GPS Collar. The ID of devices that are shared with you cannot be changed. The first number in the ID is the channel and the second number is the order. Do not use the same ID for additional GPS Collars. GPS Rate The GPS update rate can be changed for each device with options for 2 seconds, 6 seconds, 10 seconds, 30 seconds, and 120 seconds. The update rate of devices that are shared with you cannot be changed.

Color The color associated with the GPS Collar can be changed. The device color is used in the icon, tracks, compass needle, and in the Device List views. Rescue Mode Turning on Rescue Mode activates when the GPS Collar battery life is at 25% or less. The device is placed in sleep mode, and the update rate is changed to 120 seconds to reduce power consumption. The rescue mode setting cannot be changed for devices that are shared with you. Delete Delete removes the pairing between the GPS Collar and GPS Connector, or removes from the app devices shared with you. To add the GPS Collar back, the GPS Collar and GPS Connector will have to be paired. Previously shared devices will need to be shared again. History files currently recording cannot be accessed until completed. Select completed history files to playback and view details. A history file begins recording when the GPS Connector is connected to the phone and the app is open. Use the play button to view the movement from start to finish, or use the slider to jump to a specific time. Show Statistics If you press the Statistics button, it will show the dog's Status, Distance, Speed, and Altitude at the time it was recorded. If you select an item on the list, it will not play on the map. Send History File Completed history files can be emailed as a KML file. KML files can be viewed on a desktop computer using Google Earth. Please note that it may take a longer time to download if the map area and file size are larger. 4 You may select the map you downloaded in the Offline Map List. The PATHFINDER app can display custom maps created in Mbtiles file format. Users can save and share portions of the map in Mbtiles file format. Here you can see how to create and upload Mbtiles files for use in the PATHFINDER app. Creating Mbtiles Files The introduction to Mobile Atlas Creator and Maperitive will go over the differences for each program. Use the program that best suits your needs.
