

I'm not a bot

This section gives an explanation of the buttons and indicators for your washer. See your Owner's Manual for further explanation. If you would like to download or view product literature for your appliance, please visit our Manuals and Literature page.

POWER BUTTON: Touch and hold until the indicator above the Program button lights up. The indicators above all the buttons will scroll from left to right as the washer turns on. Symbols appear on the control panel and sounds are played. Touch and hold POWER to cancel a cycle. "rES" is displayed when the cycle is canceled.

PROGRAM (cycle): When you turn on the washer, the light above this button will turn on. This indicates you can now select your program or cycle. The program settings which you used last will appear on the control panel as a default.

PROGRAM/CYCLE AREA: An Indicator next to each program/cycle lights up as you use the knob to scroll through the list. Press the knob when the indicator next to the desired program/cycle lights up.

CONTROL KNOB: Turn the knob to select a program/cycle for your laundry load, change program/cycle temperature, adjust spin speed, set delay start time or dosing values, or select Other Options. Press the knob to confirm your selection.

OPTIONS: Touch to select additional wash options or additional features on the washer before touching the Start/Pause button.

Additional wash options or additional features selected after touching the Start/Pause button may not be activated. To return to factory default cycle settings, unplug the washer for 30 seconds, then plug back in.

This option helps to preserve the colors of your laundry by washing them with cold water 59°F (15°C). Suitable for lightly soiled colored laundry without stains.

The TumbleFresh™ option will periodically tumble the load after the end of the cycle every 3 minutes for 7 seconds, for up to 6 hours. To turn on the TumbleFresh™ option, touch the TumbleFresh™ button. If, however, the TumbleFresh™ option is turned on, it will stay on for all future cycles until turned back off – the washer remembers the last on/off status set. To turn off the TumbleFresh™ option, touch the TumbleFresh™ button.

This option helps to determine the correct amount of detergent for your laundry load. The concentration of detergents varies considerably, so adjust the amount of detergent as needed. Also check if the washer's preset water hardness level matches your local water hardness level and adjust it if needed. When you touch this button, the Detergent Dosing Aid symbol lights up in the display. When you touch the Start/Pause button to start the program/cycle, the drum will rotate to detect the load size of the laundry. During load detection, the time display changes from cycle time to a chasing LED animation. The display will then show the recommended detergent amount in milliliters. Use any standard measuring cup to measure out the right detergent amount. After adding detergent, close the detergent dispenser.

Touch and hold the Start/Pause button to continue the cycle.

1. Check your detergent dosing amount for medium soil level and medium water hardness. NOTE: Do not add more than the dose recommended by the detergent manufacturer.
2. Touch and hold the Dosing Aid button until the bottle symbol on the display lights up.
3. Turn the knob to adjust the dosing value to the one shown on the detergent bottle. Press the knob to confirm your selection. To set the washer for local water hardness (washer is preset for soft water):

1. Check your regional water hardness level by consulting your local authorities or the internet.
2. If your water is not soft, touch and hold the Program and Dosing Aid buttons at the same time. "1" (for soft water) appears on the display.
3. Turn the knob to adjust the water level to either "2" (Medium) or "3" (Hard). Press the knob to confirm your selection.

Delay Wash - This option starts your program/cycle at a later time - up to 24 hours. To set a Delayed Wash:

1. Touch the Delay Wash button to set the desired delay time.
2. Turn the knob to the number of hours you want to delay the start of the wash cycle. The delay time will appear on the display. Press the knob to confirm your selection.

After touching the Start/Pause button, the door will lock and the time will count down until the delay time has been reached. The washer will start and the display will show the remaining time in the cycle.

SETTINGS - not available on all cycles

Temperature - This setting lets you change the temperature of the program/cycle selected, if desired.

Spin Speed - This setting lets you change the spin speed of the program/cycle selected, if desired.

Rinse/Hold - This option is selected under spin speed. If you select Rinse/Hold, the machine will stop at the end of the rinse portion of the cycle and leave the clothes soaking until you touch the Start/Pause button to continue the drain and final spin.

Other Options - After setting temperature or spin speed, the light above "Options" lights up. Turn the knob to select the desired option(s). As you turn the knob, the option symbols above the Options button will light up one at a time. Stop turning when the symbol of the desired option lights up. Press the knob to confirm your selection.

Save Time - This option enables quicker washing. Only recommended for lightly soiled laundry.

Extra Rinse - This option helps to avoid detergent residues in the laundry by extending the rinse time. Especially suitable for baby laundry, people with allergies, or areas with soft water.

Heavy Soil - This option optimizes the stain-removal efficiency of additives. It is ideal for heavily soiled, stained laundry. Add an appropriate amount of powder in-wash additive for stain removal to the main wash compartment, together with your detergent (powder only). This may extend the program by up to 15 minutes.

Appropriate for use with oxygen-based stain removers.

IMPORTANT: Chlorine or perborate (borox) bleach agents must not be used.

Warm Rinse - This option ends with a warm rinse. This rinse relaxes the fibers of your laundry to make it feel comfortably warm when removed soon after the program/cycle ends.

PreWash - This option helps to clean heavily soiled laundry by adding a 20-minute prewash to the program/cycle selected.

Control Lock - This option allows you to lock the buttons and knob to avoid unwanted use by small children or other persons. Touch and hold the Option button until the key symbol lights up (approximately 3 seconds). All controls will be locked except for the Power button. To cancel Key Lock, touch and hold the Option button until the key symbol goes off.

START/PAUSE BUTTON - Touch to start, or touch and hold to pause, a program/cycle. When you start a program/cycle, the display shows an animation of chasing LEDs. This indicates the washer is estimating dry load size. Once the load size is estimated, water will be added to start the wash cycle.

LED DISPLAY When you select a program/cycle, its default settings will light up and the Estimated Time Remaining will be displayed. Factors such as load size, wash temperature, and water pressure may affect the time shown in the display. Tightly packing, unbalanced loads, or excessive suds may cause the washer to lengthen the program/cycle time, as well. Symbols: Door can be opened (unlocked). Water supply is inadequate. Check to make sure that your water supply has been turned on. Water cannot be drained. Drain pump filter, drain hose, or pump may be blocked. Check drain hose for kinks or clean the filter as shown in "Washer Maintenance" in your Owner's Manual.

Call for service. There is something wrong with the washer that will require an authorized service technician.

Dosing Aid symbols - see options above. Modern washing machines are complex appliances, packed with features and cycles that can be daunting to understand. One of the most common sources of confusion is the array of symbols on the control panel. Whirlpool washing machines, in particular, utilize a combination of icons and abbreviations that can leave you scratching your head. This comprehensive guide will break down the meaning of these symbols, empowering you to confidently operate your Whirlpool machine.

Understanding Whirlpool Washing Machine SymbolsThis article will delve into the meaning behind the symbols found on your Whirlpool washing machine control panel. We will explore different categories of symbols, including those related to wash cycles, temperature settings, water levels, and additional features. By the end of this guide, you will be able to decipher the language of your Whirlpool machine and optimize your laundry experience.

Common Whirlpool Washing Machine Symbols ExplainedWash Cycle SymbolsWhirlpool washing machines offer a variety of wash cycles to suit different fabric types and cleaning needs. Understanding the symbols associated with these cycles is crucial for achieving optimal results. Understanding the Cycle SymbolsNormal: This is the default cycle for everyday laundry, suitable for a mix of fabrics. The symbol typically depicts a basin of water with a few wavy lines representing the wash motion.Delicates: This cycle is designed for delicate garments like silk, lace, and lingerie. The symbol usually shows a delicate garment, like a dress or a blouse, suspended in a washing basin.Bulky: This cycle is meant for larger items like towels, blankets, and comforters. The symbol might display a larger garment, like a blanket, submerged in water.Quick Wash: This cycle provides a faster cleaning option for lightly soiled clothes. The symbol might depict a clock or a rapid wash cycle motion.Pre-Wash: This cycle uses a pre-soak to loosen dirt before the main wash cycle. The symbol might display a basin of water with a garment submerged and a timer icon.Temperature SymbolsThe temperature symbols on your Whirlpool machine control panel indicate the recommended water temperature for different wash cycles.Cold (C): This setting uses cold water for gentle cleaning. The symbol often depicts a snowflake or a drop of water with a snowflake inside.Warm (W): This setting uses warm water, ideal for most everyday laundry. The symbol usually shows a drop of water with a wave or a ripple inside.Hot (H): This setting utilizes hot water for heavily soiled items or fabrics that require a hotter wash. The symbol might display a boiling water icon or a drop of water with steam rising from it.Water Level SymbolsWhirlpool washing machines allow you to adjust the water level based on the size of your laundry load. The symbols on the control panel indicate the different water level options.Water Level Options:High: This setting fills the washing machine to the maximum capacity, ideal for large loads. The symbol might depict a washing machine tub filled to the top.Medium: This setting fills the machine to a mid-point level, appropriate for medium-sized loads. The symbol may show the washing machine tub filled to the middle.Low: This setting uses the least amount of water, perfect for small loads. The symbol might display the washing machine tub filled to a low level.Additional Feature SymbolsWhirlpool washing machines often include additional features to enhance your laundry experience. These features are represented by specific symbols on the control panel. Understanding Additional Feature SymbolsSpin: This symbol indicates the spin cycle, which removes excess water from your clothes. The symbol usually depicts a spinning washing machine drum.Extra Rinse: This option adds an additional rinse cycle for sensitive skin or for removing detergent residue. The symbol might show a basin of water with multiple rinse waves.Delay Start: This feature allows you to set the washing machine to start at a later time. The symbol might display a clock with a timer icon.Decoding the Symbols on Your Whirlpool Washing MachineBy understanding the symbols on your Whirlpool washing machine control panel, you can confidently choose the appropriate wash cycle, temperature, water level, and additional features for each load of laundry. Refer to the following steps to decipher the symbols:Consult the User Manual:Your Whirlpool washing machine came with a user manual containing a detailed explanation of all the symbols and features. Identify the Wash Cycle: The symbols indicating different wash cycles are usually grouped together. Choose the Appropriate Temperature: The temperature symbols are typically located near the wash cycle selection buttons. Adjust the Water Level: The water level symbols are usually found next to the wash cycle or temperature selection buttons. Utilize Additional Features: Symbols for additional features are often displayed separately on the control panel.ConclusionThe symbols on your Whirlpool washing machine may seem daunting at first, but by understanding their meaning you can unlock the full potential of your machine. From selecting the correct wash cycle to customizing the temperature and water level, decoding these symbols empowers you to achieve the best laundry results possible. Remember to refer to your user manual for a comprehensive explanation of the symbols specific to your Whirlpool washing machine model.Frequently Asked QuestionsWhat are Whirlpool washing machine symbols used for?Whirlpool washing machine symbols are designed to provide clear instructions for operating your machine safely and effectively. They represent different washing cycles, temperature settings, spin speeds, and other important functions. Understanding these symbols is essential for achieving the best results for your laundry and for extending the life of your appliance. They can be found on the control panel, in the user manual, or on the inside of the washing machine door.By recognizing these symbols, you can choose the appropriate cycle for different types of fabrics and laundry loads. This ensures that your clothes are cleaned properly, with minimal wear and tear, while minimizing energy consumption. Whether you're dealing with delicate silk garments or heavily soiled towels, the symbols will guide you through the process of achieving optimal laundry care.How do I decipher Whirlpool washing machine symbols?Decoding Whirlpool washing machine symbols is easier than you might think. Start by looking for a symbol that resembles a bucket or a basin. This usually represents the washing cycle. Next, look for symbols indicating temperature settings, often represented by dots or numbers. Spin speeds are typically represented by lines or circles, with more lines or circles indicating faster speeds. You'll also encounter symbols for additional functions like pre-wash, extra rinse, or delicate wash. To make it even simpler, Whirlpool provides a comprehensive symbol guide in their user manuals. You can also find online resources that translate these symbols into plain language. By familiarizing yourself with these symbols, you can confidently navigate your washing machine's settings and achieve the best possible results for your laundry.What does the symbol with a bucket and a hand mean?The symbol with a bucket and a hand typically represents a delicate wash cycle. This cycle is designed for delicate fabrics, such as silk, lace, or wool, which require a gentle washing process. It usually involves a slower washing speed, a lower water temperature, and a shorter spin cycle to prevent damage to the fabric. Using this cycle ensures that your delicate garments are cleaned effectively while minimizing the risk of shrinking, stretching, or fading. It's essential to choose the appropriate cycle for different fabrics to ensure they maintain their shape and quality. This symbol acts as a reminder to exercise caution when washing delicate items, prioritizing their preservation.What does the symbol with a bucket and a number of dots mean?The symbol with a bucket and a number of dots represents the water temperature setting for your washing machine. Each dot typically indicates a specific temperature level. For instance, one dot might represent cold water, two dots might represent warm water, and three dots might represent hot water. It's crucial to select the appropriate temperature setting based on the type of fabric and the level of soiling. Choosing the right temperature ensures that your clothes are effectively cleaned while preventing damage caused by excessive heat or cold. This symbol serves as a guide to achieving the right balance for optimal laundry care and preserving the longevity of your garments.What does the symbol with a bucket and a spiral mean?The symbol with a bucket and a spiral represents a spin cycle, with the spiral indicating the spin speed. More spirals usually denote a higher spin speed, resulting in drier clothes after the cycle. However, you should choose the appropriate spin speed based on the type of fabric.For delicate fabrics, a lower spin speed is recommended to prevent damage. Conversely, for sturdy fabrics like cotton, a higher spin speed is suitable for removing excess water. Selecting the right spin speed ensures that your clothes are adequately dried without compromising their integrity. This symbol helps you optimize the drying process and minimize the time spent on air-drying.What does the symbol with a bucket and a crescent moon mean?The symbol with a bucket and a crescent moon often represents a pre-wash cycle. This cycle is primarily used to loosen dirt and stains from heavily soiled garments before the main wash cycle. It usually involves a shorter duration and a gentler wash action.Utilizing a pre-wash cycle allows for more effective cleaning by pre-treating heavily soiled items before the main wash. This minimizes the risk of stains setting in and enhances the overall cleaning process. It's particularly beneficial for items like work clothes or heavily stained sportswear. This symbol serves as a reminder to prioritize pre-treatment for difficult stains, ensuring a cleaner and more satisfying laundry experience.What if I don't understand a symbol?If you encounter a symbol you don't understand, refer to your Whirlpool washing machine's user manual. The manual should provide a comprehensive guide to all the symbols and their meanings. You can also consult the Whirlpool website or contact their customer support for assistance. Don't be afraid to ask for help. Understanding the symbols on your washing machine is crucial for proper usage and ensuring the longevity of your appliance. It's better to clarify any doubts than to risk damaging your clothes or the machine itself. Always prioritize safety and proper operation when using any electrical appliance, and never hesitate to seek guidance when needed. Whether you've misplaced your Whirlpool user manual right after getting a new washer, you've inherited the appliance or decided to save a bit by getting a used washing machine, figuring out the symbols on the control panel can be tricky. Unfortunately, symbols are not the same for all washing machines; different manufacturers use different symbols. Aside from standard start/pause and on/off symbols, you might be having a hard time figuring out how to set your washer. Instead of risking damage to your laundry items by guessing what symbols might mean, use this guide to understand Whirlpool washing machine symbols and their functions. Colours Overview: The Colours symbol on a whirlpool washer is an image of a striped t-shirt with the word "colours" written below. This washer function sets the cycle to a colder temperature that is more suitable for coloured clothing. Although, this cold water wash cycle is typically best for lightly soiled clothing. Best used for: Lightly soiled, coloured fabrics. Benefits/Drawbacks: The primary benefit of this setting is preserving colour vibrance in clothing. However, the disadvantage is that you should only use this setting for lightly soiled laundry because the cycle uses cold water to prevent colour fading. TumbleFresh Overview: The TumbleFresh symbol has a circular swirl image with a small circle inside. The words "TumbleFresh" are seen below the image. This function will periodically tumble the laundry after a cycle for three minutes every few seconds. The washer can continue tumbling laundry periodically for up to six hours. Best used for: Preventing odours in fabric. Benefits/Drawbacks: The TumbleFresh function keeps laundry fresh by preventing it from sitting at the bottom of the drum for too long. It's a great feature to use if you want to start a load of washing before leaving the house for work or in the evening before bed. You won't need to rush to get your laundry dry because this feature will prevent odours in damp laundry loads. However, this setting will stay on as a pre-set even after a cycle has ended. With this, you must remember to turn the TumbleFresh feature off when necessary. Detergent Dosing Aid Overview: The Detergent Dosing Aid symbol is an image of a tilted measuring cup pouring liquid. Below the measuring cup, the words "detergent, 3 sec" are spelt out. This feature will help you use the right amount of laundry detergent for each wash. After pressing the button, press the start button to begin the cycle, and the drum will spin to detect the specific load size. The load time will change to display the recommended amount of laundry detergent in millimetres. Best used for: Using the proper amount of laundry detergent. Benefits/Drawbacks: The Detergent Dosing Aid feature is helpful if you aren't too sure how much detergent is needed for smaller loads of washing. Delay Wash Overview: The Delay Wash symbol is an image of an analogue clock with a small hourglass on the top right-hand side. Delay wash is written below the image. This function is used to delay the start of a wash cycle for up to twenty-four hours. After pressing the Delay Wash button, turn the knob to set the number of hours to delay the cycle. The display will change from wash cycle time to countdown timer. Best used for: Automating wash cycle time. Benefits/Drawbacks: The advantage of this function is that you can preset the washing machine to start a wash cycle even if you aren't at home. Temperature Overview: The temperature symbol is an image of a thermometer with two small arrows on the right-hand side. The word "temp" is written below. Use the temperature button to adjust the temperature of the program or cycle that you want to select. You can change the temperature using the knob. Best used for: To adjust the water temperature. Benefits/Drawbacks: Different fabrics have different care instructions. So it's essential to be able to adjust the temperature of the water. Heavily soiled clothing and heavier fabrics will need heavier washing temperatures, while synthetic materials can only handle temperatures up to forty degrees Celsius. On the other hand, cold water is best for wool and lightly soiled laundry. Spin Speed Overview: The Spin Speed button is a dial with two arrows moving around the outer side of the circle "Spin speed" is written beneath the image. This function allows you to adjust the speed of the spin cycle. On older Whirlpool washing machines, there are only two different spin speed options. The symbol for the faster spin speed setting is a tight spiral, while the slower spin speed setting is a loose spiral image. Best used for: Adjusting the spin cycle speed. Benefits/Drawbacks: The advantage of setting the spin speed higher is that you can spin heavier fabrics to release more water. At the same time, you can set the speed lower to prevent damaging delicate clothing items during the spin cycle phase. Options Overview: The options symbol is a list of three horizontal lines with square bullet points. The word "options" is written beneath the list, and a lock is seen below the word. This symbol should appear on the washer's display after you have set the temperature or the spin speed. You will need to turn the knob to select an option on the display. The options function allows you to access a few more features on your washer. Best used for: Accessing additional washer functions. Benefits/Drawbacks: This function can help you create the most suitable washing cycle conditions for particular laundry items. Quick Wash Overview: The Quick Wash symbol is a tub with circles and a wavy line to represent a load of laundry. On the left of the tub are three horizontal lines. The Quick Wash feature speeds up the time of a wash cycle and uses a cold water setting. Best used for: Lightly soiled laundry, smaller loads. Benefits/Drawbacks: This setting is helpful when you need to get a smaller load of lightly soiled washing done quickly. However, it's unsuitable for heavily soiled clothing and larger loads and heavily soiled laundry. Extra Rinse Overview: The Extra Rinse symbol is five lines of circles fanning outward to represent a downward sprinkle. Turn this feature on to increase the rinse time in a cycle and prevent any detergent residue on fabrics. Best used for: Preventing laundry detergent residue on fabrics. Benefits/Drawbacks: The Extra Rinse setting is helpful if you need to rinse certain kinds of fabrics for longer. However, the setting does increase the time of the rinse phase, so getting the laundry done will take slightly longer. Heavily Soiled Overview: The Heavily Soiled symbol is an image of a t-shirt with dark stains on it. This washer function is for heavily soiled clothing and heavier fabric types. Best used for: Heavily soiled clothing, heavy fabrics. Benefits/Drawbacks: The Heavily Soiled feature on a Whirlpool washer is best when washing extra dirty clothing and fabric types that are heavier. This setting is also great for jackets and thicker clothing items like denim jeans. Even so, when turning this setting on, the wash cycle time will increase. Warm Rinse Overview: The Warm Rinse symbol is three lines of small circles fanning outward to represent a downward sprinkle and a thermometer. A warm rinse can remove all detergent residue more effectively than the Extra Rinse setting. This setting will also keep heavier fabric types softer as warm water helps to relax the fibres. Best used for: Keeping heavier fabrics soft. Benefits/Drawbacks: The Warm Rinse function can keep fabrics softer and remove residue. While this setting won't increase the wash cycle time, it will increase the washer's power consumption. PreWash Overview: The PreWash symbol is a tub with a single vertical line inside. This setting is best for heavily soiled clothing. The program will add a twenty-minute cold wash phase to the cycle you have selected. Best used for: Heavily soiled laundry. Benefits/Drawbacks: The PreWash setting is most suitable for larger loads and heavily soiled clothing. However, this setting does increase the wash cycle time. Control Lock Overview: The Control Lock symbol is two lines and a circle that represents a key. The Control Lock enables you to lock the knob and buttons on the washer's control panel as a child-friendly feature. Press and hold the options symbol for about three seconds until the key symbol lights up. To unlock the control panel, press and hold the options button until the key symbol light turns off. Best used for: Locking the control panel and door of your washing machine. Benefits/Drawbacks: The Control Lock feature is beneficial as a child safety feature. This section gives an explanation of the buttons and indicators for your washer. See your Owner's Manual for further explanation. If you would like to download or view product literature for your appliance, please visit our Manuals and Literature page.

POWER BUTTON: Touch and hold until the indicator above the Program button lights up. The indicators above all the buttons will scroll from left to right as the washer turns on. Symbols appear on the control panel and sounds are played. Touch and hold POWER to cancel a cycle. "rES" is displayed when the cycle is canceled.

PROGRAM (cycle): When you turn on the washer, the light above this button will turn on. This indicates you can now select your program or cycle. The program settings which you used last will appear on the control panel as a default.

PROGRAM/CYCLE AREA: An Indicator next to each program/cycle lights up as you use the knob to scroll through the list. Press the knob when the indicator next to the desired program/cycle lights up.

CONTROL KNOB: Turn the knob to select a program/cycle for your laundry load, change program/cycle temperature, adjust spin speed, set delay start time or dosing values, or select Other Options. Press the knob to confirm your selection.

OPTIONS: Touch to select additional wash options or additional features on the washer before touching the Start/Pause button. Additional wash options or additional features selected after touching the Start/Pause button may not be activated. To return to factory default cycle settings, unplug the washer for 30 seconds, then plug back in.

This option helps to preserve the colors of your laundry by washing them with cold water 59°F (15°C). Suitable for lightly soiled colored laundry without stains.

The TumbleFresh™ option will periodically tumble the load after the end of the cycle every 3 minutes for 7 seconds, for up to 6 hours. To turn on the TumbleFresh™ option, touch the TumbleFresh™ button. If, however, the TumbleFresh™ option is turned on, it will stay on for all future cycles until turned back off – the washer remembers the last on/off status set. To turn off the TumbleFresh™ option, touch the TumbleFresh™ button.

This option helps to determine the correct amount of detergent for your laundry load. The concentration of detergents varies considerably, so adjust the amount of detergent as needed. Also check if the washer's preset water hardness level matches your local water hardness level and adjust it if needed. When you touch this button, the Detergent Dosing Aid symbol lights up in the display. When you touch the Start/Pause button to start the program/cycle, the drum will rotate to detect the load size of the laundry. During load detection, the time display changes from cycle time to a chasing LED animation. The display will then show the recommended detergent amount in milliliters. Use any standard measuring cup to measure out the right detergent amount. After adding detergent, close the detergent dispenser.

Touch and hold the Start/Pause button to continue the cycle.

1. Check your detergent dosing amount for medium soil level and medium water hardness. NOTE: Do not add more than the dose recommended by the detergent manufacturer.
2. Touch and hold the Dosing Aid button until the bottle symbol on the display lights up.
3. Turn the knob to adjust the dosing value to the one shown on the detergent bottle. Press the knob to confirm your selection. To set the washer for local water hardness (washer is preset for soft water):

1. Check your regional water hardness level by consulting your local authorities or the internet.
2. If your water is not soft, touch and hold the Program and Dosing Aid buttons at the same time. "1" (for soft water) appears on the display.
3. Turn the knob to adjust the water level to either "2" (Medium) or "3" (Hard). Press the knob to confirm your selection.

Delay Wash - This option starts your program/cycle at a later time - up to 24 hours. To set a Delayed Wash:

1. Touch the Delay Wash button to set the desired delay time.
2. Turn the knob to the number of hours you want to delay the start of the wash cycle. The delay time will appear on the display. Press the knob to confirm your selection.

After touching the Start/Pause button, the door will lock and the time will count down until the delay time has been reached. The washer will start and the display will show the remaining time in the cycle.

SETTINGS - not available on all cycles

Temperature - This setting lets you change the temperature of the program/cycle selected, if desired.

Spin Speed - This setting lets you change the spin speed of the program/cycle selected, if desired.

Rinse/Hold - This option is selected under spin speed. If you select Rinse/Hold, the machine will stop at the end of the rinse portion of the cycle and leave the clothes soaking until you touch the Start/Pause button to continue the drain and final spin.

Other Options - After setting temperature or spin speed, the light above "Options" lights up. Turn the knob to select the desired option(s). As you turn the knob, the option symbols above the Options button will light up one at a time. Stop turning when the symbol of the desired option lights up. Press the knob to confirm your selection.

Save Time - This option enables quicker washing. Only recommended for lightly soiled laundry.

Extra Rinse - This option helps to avoid detergent residues in the laundry by extending the rinse time. Especially suitable for baby laundry, people with allergies, or areas with soft water.

Heavy Soil - This option optimizes the stain-removal efficiency of additives. It is ideal for heavily soiled, stained laundry. Add an appropriate amount of powder in-wash additive for stain removal to the main wash compartment, together with your detergent (powder only). This may extend the program by up to 15 minutes.

Appropriate for use with oxygen-based stain removers.

IMPORTANT: Chlorine or perborate (borox) bleach agents must not be used.

Warm Rinse - This option ends with a warm rinse. This rinse relaxes the fibers of your laundry to make it feel comfortably warm when removed soon after the program/cycle ends.

PreWash - This option helps to clean heavily soiled laundry by adding a 20-minute prewash to the program/cycle selected.

Control Lock - This option allows you to lock the buttons and knob to avoid unwanted use by small children or other persons. Touch and hold the Option button until the key symbol lights up (approximately 3 seconds). All controls will be locked except for the Power button. To cancel Key Lock, touch and hold the Option button until the key symbol goes off.

START/PAUSE BUTTON - Touch to start, or touch and hold to pause, a program/cycle. When you start a program/cycle, the display shows an animation of chasing LEDs. This indicates the washer is estimating dry load size. Once the load size is estimated, water will be added to start the wash cycle.

LED DISPLAY When you select a program/cycle, its default settings will light up and the Estimated Time Remaining will be displayed. Factors such as load size, wash temperature, and water pressure may affect the time shown in the display. Tightly packing, unbalanced loads, or excessive suds may cause the washer to lengthen the program/cycle time, as well. Symbols: Door can be opened (unlocked). Water supply is inadequate. Check to make sure that your water supply has been turned on. Water cannot be drained. Drain pump filter, drain hose, or pump may be blocked. Check drain hose for kinks or clean the filter as shown in "Washer Maintenance" in your Owner's Manual.

Call for service. There is something wrong with the washer that will require an authorized service technician.

Dosing Aid symbols - see options above.
