Which of the following weeds is effective in controlling water pollution caused by from industrial effluents Ā View Reply Discuss in Forum Answer & Explanation Answer: Option C Explanation: Water Water Water hyacinth (Eichhornia crassipes) is used to treat not only domestic but also industrial wastewater. Other studies have evaluated the potential of water hyacinth to absorb various organic chemicals such as phenols and toxaphene. It can easily absorb, accumulate and concentrate heavy metals such as lead, cadmium, mercury and nickel. 5. The xylem in plants is responsible for:b View Reply Discuss in Forum Reply & Explanation Answer: Option A Explanation: water transport.Xylem is one of the two types and categories of tissues transported in vascular plants, while phloem is the other. Along with phloem (a tissue that carries sugar from the leaves to the rest of the plant), xylem is found in all vascular plants. The basic function of xylem is to transport water from roots to buds and leaves, but it also carries some dissolved nutrients. 6.Ā That between the data correctly explains the phenomenon of the āTest Tube Baby' -āĀ When the fertilization is internal and the development is external. well When the fertilization is external and the development is every embryo formation process is in the test tube.d When the embryo develops in a test tube. Answer Discuss in Forum Answer & Splanation Answer: Option B Explanation: When fertilization is external & development is internal. In vitro fertilization (IVF) is a process by which an egg is fertilized by sperm outside the body: in vitro. The baby in the test tube was born from in vitro fertilization. When a woman's natural cycle is monitored to collect a naturally selected ovum (egg) for fertilization, it is known as the IVF Natural Cycle. The fertilized egg (zygote) is then transferred to the patient's uterus with the intention of establishing a successful pregnancy. 7. In eye donation, which part of the eye is transplanted by the donor? Answer: Option C Explanation: 8. The locomotor organ of a starfish is View reply Discussed in Forum Reply & Explanation Answer: Option D Explanation: Feet pipe. Stellar fish make movements with the help of tube feet that are part of the vascular system of water. The water vascular system serves to transport oxygen from, & carbon dioxide to, the feet of the tube and also nutrients from the gut to the muscles involved in locomotion. In addition to their function in locomotion, the tube feet act as accessory gills. 9. The genetic material that contains all the information necessary for the development and existence of an organism is View reply Discuss in Forum Answer and Explanation Answer: Option D Explanation: 10. Plants absorb most of the water they need through their View Answer Discuss in Forum Answer and Explanation Answer: Option C Explanation: 11. Foot and mouth disease in animals, a current epidemic in some parts of the world, is caused by Answer If a person belongs to blood group AB, he has both A & B antigens on the surface of his red blood cells and no A or B antibodies at all in his blood plasma. So you can donate blood to those who have blood group AB; but you can receive blood from groups AB, A, B, & O. 13. Which among the data listed is not a characteristic of organic farming – a much lower energy consumptionb Use of synthetic fertilizers The non-use of chemical fertilizers and pesticides Soil is fed for the use of fur keeping the microorganisms Reply Discuss in Forum Reply & Splanation Reply: Option B Spieg Action: Use of synthetic fertilizers. Organic farming is a form of farming that relies on techniques such as crop rotation, green manure, compost, and organic pest control. Use fertilizers and pesticides if they are considered natural (such as bone meal from animals or pyrethrin from flowers,) but exclude the use of synthetic petrochemical fertilizers and pesticides, plant growth 14.the following bodies 1. Agaricus 2. Nostoc 3. Spirogyra Which of these is/ is used as a biofertilizer/biofertilizer? Answer: Option C Explanation: 15. Which of the following glands is responsible for the secretion of sex hormones - View reply Discuss in Forum Answer & Splanation Answer: Option C Explanation: pituitary gland. The pituitary is sometimes referred to as the master glandas that controls hormonal functions such as our temperature” Sponsored Links Disha Experts is a team of the most renowned and prolific authors of pioneering content in the segments School and Test Prep (Competitive Exams & Government Vacancies).
