# Gif image in android studio

How to use gif image in android studio example. How to share gif image in android studio. How to set gif image as background in android studio. How to use gif image in android studio example github.

Hi! In this article I am sharing how to create a splendid splash screen in Android with GIF. We will do the GIF SPLASH screen in Android Studio in today's example. You can really make great animated and attractive large screen with GIF. GIF offers a seamless animation to the first impression of any Android application. It is very easy to make an Android Splash Screen animation. Below are the steps necessary to create a GIF Android Splash Animation.gif Screen screen in Android Studio Step 1. Library This project requires a third-party library to show the GIF file in an XML layout file. We will use this Github Library: [Android-GIF-Appropriate](#) Write under the line in The Build.Gradle (module: App) `implementation 'com.github.bumptech.glide:glide:4.11.0'` `implementation 'com.github.bumptech.glide:gifdecoder:1.2.3'` Now it's time to play with the GIF file. Android has several layouts for different display factors. For example, `image` display for image or image, `text` for string, `button` for clickable button, `editText` for the entry box, etc. But it has no widget built for GIF. So, we must create it alone. Here is here that the Github library will help us at Step 2. Create a power-screen activity. Open your XML Activity and Add these Activities codes `_Splash_Screen.xml`.
