Tabula is used to power investigative reporting at news organizations of all sizes, including ProPublica, The Times of London, Foreign Policy, La Nación (Argentina), The New York Times and the St. Paul (MN) Pioneer Press. Grassroots organizations like SchoolCuts.org rely on Tabula to turn clunky documents into human-friendly public resources. And researchers of all kinds use Tabula to turn PDF reports into Excel spreadsheets, CSVs, and JSON files for use in analysis and database applications. Windows & Linux users will need a copy of Java installed. You can download Java here. (Java is included in the Mac version.) Download the version of Tabula for your operating system: Extract the zip file. (Instructions: Windows, Mac) Go into the folder you just extracted. Run the "Tabula" program inside. A web browser will open. If it doesn't, open your web browser, and go to . There's Tabula! Upload a PDF file containing a data table. Browse to the page you want, then select the table by clicking and dragging to draw a box around the table. Click "Preview & Export Extracted Data". Tabula will try to extract the data and display a preview. Inspect the data to make sure it looks correct. If data is missing, you can go back to adjust your selection. Click the "Export" button. (You can open the downloaded file in Microsoft Excel or the free LibreOffice Calc) Note: Tabula only works on text-based PDFs, not scanned documents. If you're about to head into a meeting, having access to documents from your smartphone could be extremely useful.
