To view hardware information pages, you need to accept cookies by clicking on 'yes, I accept cookies'. "Why do anyone want to use their mobile phone as a webcam?" This was the most common people reaction Had told them what we were trying to do, but in reality there are some good reasons to do this pretty. For one, you can transform an old phone into a security camera or baby monitor that can be used without camera by buying an autonomous brand new property. And if your phone doesn't have a camera on the front, or if your PC does not have a webcam build in, so you can use the back phone camera for video calls.it is obviously esier buy a camera Dedicated, but if you don't want to buy a new webcam brand, or want to find good use for your old phone instead or sell it, then your creation like this is a nice idea. Here's how to set it up.Security Camerone of the ways you can use an old phone is setting it as a security camera or a child monitor. This is quite easy to do with right applications for both Android and iPhone phones. This is how you set it: Android quick search on Google Play throws several webcam applications. We tried 5 of the first 10 results, but we must do not work properly. From those who did not precipitate repeatedly, Smartcam succeeded to demonstrate the video, and DroidCam need you to install a Windows application for WorkIP Webcam is easily the best of the lot, because it works via the browser, which DA Cross Platform compatibility. To set up a security camera on Android, follow these steps.1. Connect the computer and phone to the same Wi-Fi Network.2 network. Install the IP Webcam app on your smartphone.3. Close all other camera applications. Force close them from App Switcher before PROED.4. Launch the IP app. Scroll down and tap Start Server.5. The app will now be at the fire to the phone camera and view a URL. Our URL was . 6. Enter this URL to any browser on your computer and Hit Enter.7. In the browser, you will see a drop-down menu following video rendering. Select Browser.8. Below it, you will see renderer audio. Select HTML WAV. Now you will see a live video feed in your browser. You can also record this movie via the browser. To do this, just press the red recording button under the video. This allows you to save the movie like a MP4.There will be a slight lay if you activate HTML Wav Audio in the browser. You can select the Flash option (it does not work on all computers) or open the same URL in VLC Media Player. 9. To do this, first download and install VLC from this site. Then in VLC, go to Network Stream and enter the URL from App as seen in Step 5.Once The application is running, it is not necessary to keep the phone screen. It works even when the phone is locked, but the video feed is slightly softer when the screen is ON.Istwo of the most popular webcams applications on the App Store are Epoccam and PocketCam. We tried the creation of pocketcam, but the process was too complicated and, even though we managed to configure it, we discovered that the free pours rests to the video in black and white and without audio. audio. A paid version that gives you access to all the functionality of PocketCam. The other hand, Epoccam is free (with ads) and is very easy to configure. That's why we recommend using Eparocam. This is like: 1. Make sure the phone and computer are on the same wi-fi.2 network. Download the EpiccoM app on your iOS and Windows or Mac Machine.3 device. When installing Eparocam, you will ask you to install some drivers. Click Install in addition to both cases. These are audio and video drivers that allow the app to work as a webcam.4. Start the eparto on your iPhone and your computer.5. The app automatically searches for other devices in a 6
