```
Usage: busybox [function] [arguments]...
or: busybox --list[-full]
or: function [arguments]...

BusyBox is a multi-call binary that combines many common Unix
utilities into a single executable. Most people will create a
link to busybox for each function they wish to use and BusyBox
will act like whatever it was invoked as.

Currently defined functions:
[, [[, acpid, add-shell, addgroup, adduser, adjtimex, ar, arp, arping,
awk, base64, basename, bbconfig, beep, blkid, blockdev, bootchartd,
brctl, bunzip2, bzip2, cal, cat, catv, chat, chatr, chgrp,
chmod, chown, chpasswd, chpst, chroot, chrt, chvt, cksum, clear, cmp,

Terminal Emulator Commands

alias

The alias command is used to alias for a command or group of commands and to launch the command or group of commands using the alias.

The general syntax for the alias command varies somewhat according to the shell. In the case of the bash shell it is

```
alias [-p] [name="value"]
```

For example, an alias named ll could be created for the command ls -al as follows:

```
alias ll="ls -al"
```

arch

The arch command is used to print the machine's architecture

cal/ncal

The cal and ncal commands display a calendar in the output.

cal command is used to display the calendar.

SYNTAX:

```
cal [options] [month] [year]
```

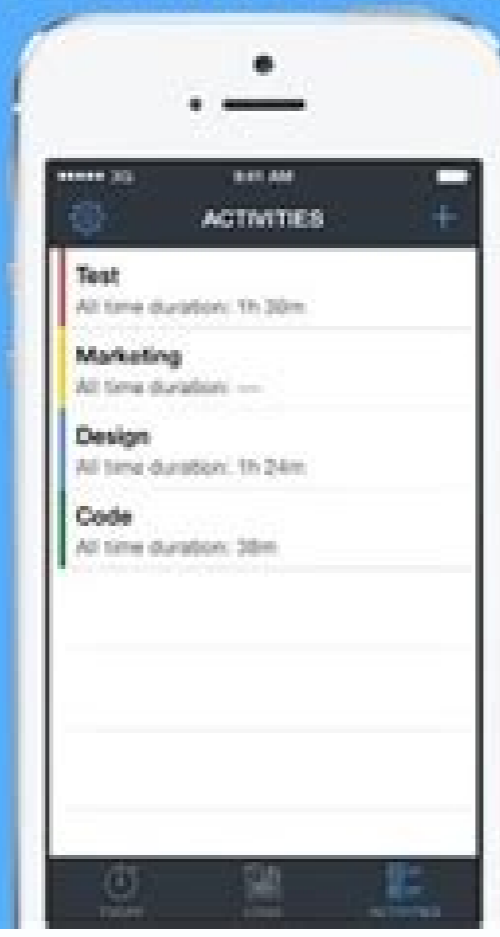

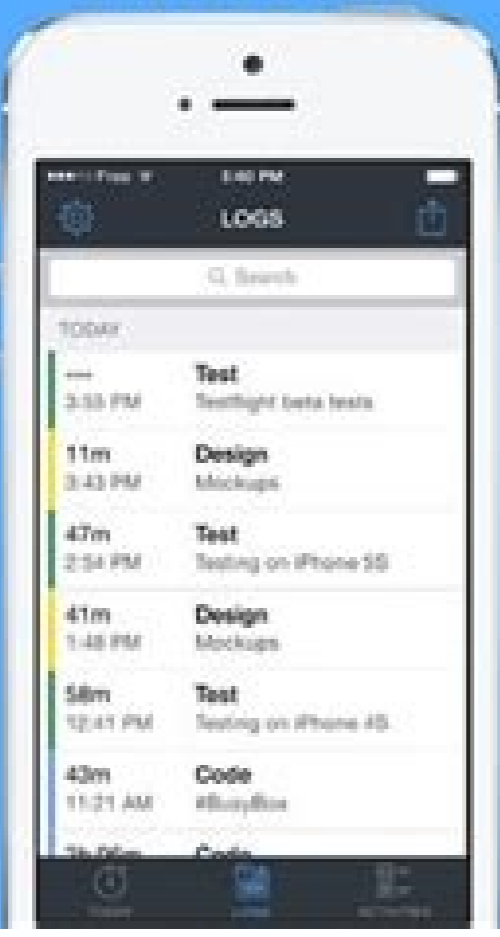

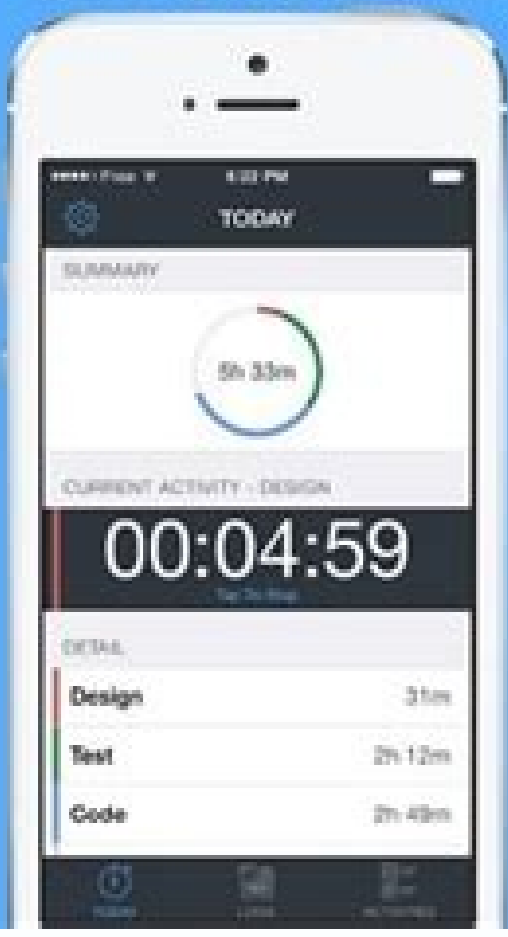

cat

BusyBox
Track the time you are spending on your tasks

Export your Data
Export your activity data to a CSV file

Get More Efficient
Measure the total time that you spend on each activity
